

GESTURES DICTIONARY

This dictionary provides a list of hand gestures that creates a personal connection between the user and his screen through spreading a familiar and harmonic experience.

Acting like **MOUSE**

As we use the mouse to communicate with the screen by **pointing** and **clicking**; The iris tracking feature makes the screen accessible to the user through pointing by his eyes to anything on the screen. For clicking there is a familiar gesture to be used for right clicks and another one for left clicks.

POINTING you can use your **eyes to point** anywhere on the screen.

CLICKING

Right Click use your **thumb & index finger** and bring them together tightly just as pinching.

Left Click use your **thumb & middle finger** and bring them tightly.

you can **DRAG & DROP** by **holding your pinch gesture**.

Acting like **KEYBOARD**

The keyboard is used as an input device to the device and doing actions using **shortcuts**. We are simply replacing some shortcuts using the Human-Interface technology to create a simpler, easier and familiar experience.

CLOSE the window screen: bring **all fingers to fist**.

SCROLL over the screen: use **the index finger moving up & down**.

BACK & FORWARD the tab: swipethe **hand right or left**.

PAUSE or PLAY the videos & audios: **raise hand** to control.

VOLUME controlling: the **palm & fingers** looking **upward & downward**.
